

PRE-TRIP CHECKLIST

Improve safety and vehicle maintenance with customisable inspection forms. Include photos of damage or issues with timely electronic reports. Your team can be routinely up-to-date with maintenance requirements making servicing more efficient and responsive.

Pre-Trip Checklist is an application that enables drivers to go through a pre-defined vehicle safety inspection and driver fit-for-duty checklists. All available for the driver electronically, it provides an efficient method of recording compliance information in real-time, reducing the amount of paperwork.

Driver's may be out of the depot for days at a time, especially when considering linehaul. This means that paper-based checklists may not get back to the office, they may be lost, torn or illegible. When considering vehicle roadworthiness, it's important to know of issues or faults as soon as possible. As drivers submit the checklist, alerts are raised instantly to allow maintenance staff to get ahead and jumpstart internal workflows to expedite the process to ensure the vehicle is safe to drive. Often, you are able to catch the vehicle before it leaves the depot.

The application, delivered directly via the iFace, allows the driver to view previously completed checklists. This can be added to the driver's pre-start workflow to ensure that previously declared faults have been fixed prior to completing their checklist for the trip. This is an essential feature, especially when requested by road-side enforcement.

The checklists themselves, are created and managed all from the back-office, allowing you to create checklists to match and enhance existing processes and take your compliance efforts to

the next level. With multiple question types available from yes/no and numerical inputs, you're able to take this further by creating a workflow around questions answered by drivers that are marked as failed, and ask a further question and allow the driver to take a photo.

It's an effective application that when paired with DIRECTOR's maintenance module, offers a powerful way to optimise service schedules and keep your fleet maintained at the highest standards. With instant electronic reporting available, audits become a click of a button, giving you an easy and convenient way to comply and keep on top of your maintenance records.

Pre-Trip Checklist gives transport operators the ability to pick up on problems immediately and helps protect your drivers while it keeps your vehicles safely on the road.

Pre-Trip Checklist Features and Benefits

- Easily create and manage your own pre-trip checklists, and synchronise with fleets at the click of a button.
- Back-office staff can review completed checklists and print PDF or export records to Excel for flexibility integrating with your existing maintenance processes.
- Creates a simple workflow for drivers to fill in information, take photos and submit checklists.
- Real-time alerts raised when faults are detected.
- Saves you time and money, reduces delays, makes servicing more efficient and gets your drivers and vehicles back on the road quicker and safer.
